The reverend who rode with the Rockers

Most people give "Rockers" a wide berth. These leather-jacketed young people on their heavy motorbikes have formed gangs modelled on America's Hell's Angels.

They are quick with a knife, and the police keep a watchful eye on them.

Psychologists say they are intellectually infantile with a pronounced drive to destroy.

But for Berlin's Pastor Bernd Jürgen Hamann they are first and foremost people — people with a heart, with problems, fears and a longing for security.

It is not only the Christian's love of his fellow man that motivates Rev Hamann, who has been devoting much of his working day to Berlin's Rockers over

the past eight years — so much so that he has been nicknamed the "Rocker Pastor."

Rev Hamann is himself a passionate motorbike rider, so he has at least one thing in common with these outsiders of society. On a number of occasions he has mediated after Rocker excesses in his parish and after an attack on a city home for juveniles.

One day, he drove up with his motorbike at a pub where the Rockers used to gather, talked to them and eventually gained their confidence. In the end, they not only respected him but made him a member of the gang.

The 38-year-old pastor agreed to join them on condition that he would never be part of any criminal act and that he would never raise his hand against anybody.

It was hard for the Rockers to accept these terms since a Rocker who does not lash out is unimaginable.

Eventually, Rev Hamann started working for his gang in earnest. He managed to get them a place where they could meet and he was always ready to give advice when they came to him with their problems.

But above all, he tried to channel their excess energy and pent-up aggressions and to prevent them from breaking the law.

He organised drives to the countryside, working on the principle that this would keep them out of mischief.

The group, Rev Hamann has come to realise, is of central importance for the Rockers — a haven and a substitute for the family. It is also a substitute for the rest of the world, which has rejected them and which they therefore despise.

One trait they all have in common is the inability to understand that what they are doing is wrong. It is always the "others" who are at fault. Strength is their only ideal and to demonstrate it they lash out. Seeing the fear they cause in other people gives them self-assurance and makes them feel strong.

Rev Hamann has never had any illusions about the success of his work. He has never thought that he could turn these toughs into a pious flock.

So he has never tried. The emphasis of his work does not lie on teaching Christianity; he sees himself as a social worker rather than as a pastor.

When the first group of Rockers he joined broke up he joined another, stay-

ing with it for four years. Like with the previous group, he gained the Rockers' confidence after much hard work.

He organised leisure activities and visited group members in jail. He baptised the illegitimate children and married the occasional couple.

Above all, he managed to channel their activities and criminal acts dwindled to zero.

This remained so until a new generation in the group took over. The older members left and the young ones that followed opposed the pastor. The basis of cooperation became increasingly untenable and crime began again. Rev Hamann left the group in 1979.

Were all these years of work in vain? The pastor admits that he achieved too little. His wish to turn these men into "decent Rockers" did not materialise.

But he has gathered enough experience which will help him in future projects with the bullyboys. As in the past, he can be certain of the Church's support.

Anti-terror policeman says the risk is measurable

All that the friends and neighbours of Rainer Wolfram, 35, know about him is: he is a civil servant, drives an Opel Ascona and leaves for work at 7 a.m. carrying a brown briefcase.

And this is all they are permitted to know for Herr Wolfram works for a special commando dubbed SEK. SEK is a sort of GSG9 of the Länder (GSG9 being the special federal border police unit trained for anti-terrorist missions).

There is nothing in Rainer Wolfram's appearance that would resemble a James Bond. His hair is thinning and he looks more like a schoolmaster than an anti-terrorist specialist.

"Adventurers are the last thing we need. We're a bunch of highly qualified experts in our field," he says.

His wife Ingrid had the wits scared out of her when he told her five years ago that he had joined SEK.

"But," says Herr Wolfram, "that was only because she didn't know what the job was all about. Sure, it's a risky business, but the risk is calculable."

What makes it calculable is the strict selection before an applicant is permitted to join. Wolfram worked at a police precinct and later as a plainclothes patrolman. When he applied for SEK five years ago he had to undergo extensive tests about familiarity with the law, the ability to endure physical stress, psychological stability and speed of reaction.

Lower Saxony's SEK has 50 men. A

West steers course of unity in Venice

Summit diplomacy is in full swing. A week after the Venice summit of EC heads of government, leaders of the seven major Western industrialised countries conferred in the Italian city. Venice 2 was their sixth international economic summit and would in all probability have been a routine gathering with a prearranged publicity bonus for the leaders concerned.

But the course of world affairs rewrote the agenda to give pride of place to the post-Afghanistan situation.

For the four European participants, Britain, France, Italy and the Federal Republic of Germany, Venice was also a bid to coordinate policy with the United States.

Great store is invariably set by summit meetings. Chancellor Schmidt regularly reminds EEC summits that decisions are expected.

In point of fact, however, Herr Schmidt only really values the exchange

Punks: gathering power of an undefined philosophy

The German Tribune Magazine is included with this issue.

Ideas that takes place at such gatherings. That, he feels, is what really counts.

Venice 2 was nonetheless more than a philosophical fireside chat. It should have been held five months ago to prevent the West from drawing varied conclusions from the Soviet occupation of Afghanistan.

A high price has been paid for failure to do so. Seldom has the West been so disunited and created such an uncohesive impression at a critical juncture.

Each and every point of fracture that has arisen over the years has been laid bare with frightening clarity.

It was not merely a matter of whether Europe is right in its disappointment at President Carter's weak leadership or America is right in its annoyance at the German egoism of Europe's attitude.

What mattered first and foremost was

that the Soviet Union might feel encouraged to undertake similar military ventures elsewhere.

Over Afghanistan the West has clearly failed to close ranks. Verbal condemnation of the Soviet invasion counts for little when there is no action in its wake.

So the task facing the West in Venice was to reconcile the different viewpoints, with a key role being allotted to Bonn.

France may go it alone and Britain promise the earth and fail to deliver, but these are shortcomings America is readier to tolerate than the merest suggestion of deviation from the Western policy line by Germany.

Given its economic potential, Bonn is regarded by Washington as the cornerstone of the Atlantic alliance in Western Europe, and more is expected of Bonn than of London or Paris.

At the same time no-one could have a keener interest in maintenance of the North Atlantic pact than Bonn. It is the basis of West Germany's very existence as it now stands.

So the success of Venice 2 depended on how well President Carter and Chancellor Schmidt came to terms, especially as it was no secret that their personal relationship left much to be desired.

In recent months there have been times when the impression was created that Bonn's tendency towards greater independence of the United States had something to do with this personal relationship.

Whatever the reasons may have been, the crucial factor is the impression that arises in the United States, and Bonn is currently under a cloud in America.

In the debate on a joint strategy towards the Soviet Union parts will be played by both the Nato decision to

modernise medium-range nuclear missile potential in Europe and trade — trade with the Eastern block. The Nato missile modernisation decision, which has been the butt of Soviet attacks on the West, was a remarkable token of Nato's ability to act.

But is has already been called into question. Belgium and Holland are trying to shelve their limited commitment to the joint decision. Italy might also be tempted if any weakening of the stand were to become apparent.

Chancellor Helmut Schmidt must make

Appointment in Venice: The attention of Chancellor Schmidt is briefly caught as he shares a relaxed moment with President Carter and Secretary of State Muskie. In the background is the US national security adviser, Zbigniew Brzezinski. (Photo: dpa)

It clear in his talks with President Jimmy Carter in Venice that the Federal Republic of Germany intends to remain firmly behind the Nato decision, so that America can take reassurance from this solidarity.

Official declarations in the run-up to the Venice summit having sounded an aggrieved note at times, the course of the talks themselves was rendered none the easier.

It remains to be seen how the new US view of the overall situation is to be reconciled with Western Europe's wish for business as usual (as far as possible, that is) in trade with the Eastern bloc.

The United States has grave misgivings about Soviet intentions, and Western efforts to boost defence potential and offset Soviet arms superiority in a number of sectors are continually undermined by this trade.

European policy has a split personality, and this is an issue on which it is unmistakably apparent.

King Khaled of Saudi Arabia is welcomed to Bonn by President Carter. (Photo: Hans Windeck)

Saudi Arabia's King Khaled visits Bonn

Not for nothing did Bonn welcome King Khaled of Saudi Arabia with the greatest respect. Chancellor Schmidt was not just being polite when he thanked the King for the responsible oil price policies pursued by Riyadh.

Saudi Arabia is not only the foremost oil exporter but also Bonn's major supplier, meeting a quarter of Germany's petroleum import requirements.

So King Khaled's visit to Bonn and West Berlin was much more than a fairy-tale or picturesque interlude. Very real political issues were involved.

Saudi Arabia does not just want to sell oil; it is also on the lookout for useful economic cooperation in industrial development.

The petrodollars Riyadh holds are a powerful incentive, and not just for the DM2.5bn loan Bonn recently raised in Saudi Arabia.

In view of unrest in the region, Iran and Afghanistan being cases in point, the political importance of Saudi Arabia has assumed vital significance for both Bonn, Europe and the West as a whole.

Saudi Arabia is felt to be indispensable as a reliable partner and a factor for order in the Gulf.

As a number of difficulties arise in connection with the Middle East and the future of Israel, diplomatic skill is called for in cooperation between Bonn and Riyadh.

The two countries were no more on the same wavelength than were President Carter and King Hussein of Jordan in Washington, but both encounters testify to the West's need to intensify its dialogue with the Arab world.

They also show that Arab moderates are banking on the West in view of the Soviet threat to the region. So King Khaled's visit to Bonn can also be considered an auspicious occasion.

tyres wore down the rear axle tended to get out of control on fast corners I decided to steer clear of every last ounce of risk."

So Mass is a man who has himself and his car under control, who can calculate his likely success and who is now successfully doing so.

At Jarama, for instance, the 22-year-old US driver Eddie Cheever was forced to retire after setting the pace for lap after lap. Cheever was so exhausted he collapsed after he climbed out of the car.

Mass felt sorry for him. "He was driving so well I should not have begrudged him a place at the finish — behind me, mind you," he said.

In the Spanish grand prix Mass ranked 14th in training and slowly but surely worked his way to the front. He is an outstanding long-distance man and it showed.

Once he had worked his way into second place all he wanted to do was to last the distance. Alan Jones, the winner, is not a driver to wager his last shirt either, preferring to drive quietly and sensibly.

At one point Jones found he was on his own, pressed by no-one, on the straight. He promptly slowed down, his water temperature having reached 135°C. "It was a miracle the engine didn't let me down," he later said.

He came first, Mass second. But the result still awaits ratification.

Former POW comes back from official death after 36 years

A 68-year-old man declared officially dead in 1973 has returned to Germany after an absence of 36 years. He is Wilhelm Dyck, a Silesian who was taken prisoner-of-war by the Russians.

He chose to stay in the Soviet Union after inquiries had revealed that his wife and family in Germany were dead. But this information was incorrect.

So was the story told his wife in Dachau, near Munich, who was informed in 1973 that her husband had been blown up by a landmine on the refugee trek in 1944.

But she wouldn't believe it and never abandoned hope. People returning from the Soviet Union had told her sister in

Friedland refugee camp about a Wilhelm Dyck who was alive and well in the Urals.

For months her letters were unanswered. Her husband never received them. Then, in 1978, he wrote and she learnt that he was working in an engineering factory.

He had married again, a woman of German extraction, in 1963, but they had no children and his second wife died in 1977.

So after application procedures and the usual wait he and his first wife have been reunited in Dachau after 36 years.

■ PROFILE

Stoltenberg to be deputy if Strauss wins

Gerhard Stoltenberg, the Prime Minister of Schleswig-Holstein, has agreed to be Franz Josef Strauss' deputy if Strauss is elected Chancellor on October 5.

The decision was greeted with relief by Stoltenberg's friends both in Bonn and the *Länder*, who were waiting for him to enter the election fray.

But they are thinking not so much of election itself as of the period after it — in case Strauss fails and a new debate on the leadership takes place.

Gerhard Stoltenberg is no friend of simple judgements, especially when he himself is concerned.

"I have no definite career plans," he assures his visitor with great composure, probably to underline that he is not consumed by ambition and chasing after the highest offices.

Besides, it would run counter to his cool, north-German temperament if he were to broadcast advances in his career with promises and assurances.

Stoltenberg has never been one to shoot from the hip. His mottoes are caution and avoidance of all imponderable risks. When he is not absolutely sure of something, he prefers to keep silent; and even when he has got everything clearly worked out in his head, he always talks moderately.

SPD floor-leader Herbert Wehner once mockingly described Stoltenberg as *der große Klare aus dem Norden*.

However, on closer contemplation, Stoltenberg's friends could find nothing derogatory about this description — indeed they found it very apt and unintentionally positive.

They thus transformed Wehner's jibe into testimony to the clearheadedness and straightforwardness of their *Land* Prime Minister in Kiel.

Stoltenberg's decision to join the Strauss' election team in spite of previous reassurances that he would be staying in Schleswig-Holstein and not taking up a ministerial post in Bonn is a direct consequence of the CDU/CSU's election defeat in North Rhine-Westphalia.

Most of the opposition regarded this as a defeat for Strauss, a result of the anti-Strauss campaign.

When in July last year Franz Josef Strauss was elected CDU/CSU Shadow Chancellor the only prominent north German politician on whose support he could rely was Lower Saxony Finance Minister Walther Leisler Kiep — despite their differences.

Land Prime Minister Stoltenberg and Albrecht, neither of whom had shown any enthusiasm for Strauss' candidacy, conspicuously held back — Stoltenberg because he had promised the people of Schleswig-Holstein before the election that he would remain in Kiel and Albrecht because he wanted to be Shadow Chancellor or nothing.

However, the defeat in North Rhine-Westphalia was a severe blow to the Opposition. The disappointing result underlined the danger that the Opposition might face a similar defeat on October 5 followed by an impending slump.

To reduce the undeniable effect of the anti-Strauss campaign and to prevent a mood of defeatism gripping the party, the CDU executive argued strongly for the election team to be announced long before the election.

When the team was announced a fortnight ago, Gerhard Stoltenberg was given particular prominence.

Stoltenberg says that the short-term aim is, if not election victory, then at least a respectable election result which would banish the danger of a split in the Opposition ranks such as nearly occurred when the CSU threatened to break away in Wildbad Kreuth in autumn 1976.

But Stoltenberg's prominence in the election team will also of course have long-term effects. If the CDU/CSU loses, then in accordance with the party's ruthless practice Strauss will be toppled.

His fate would be the same as that of Kurt Georg Kiesinger 11 years ago and Rainer Barzel and Helmut Kohl since.

Stoltenberg does not disguise his distaste when he talks of previous procedures in the CDU/CSU for appointing people to the highest offices.

The thought that this could happen again obviously appals him. Of course, as in the past, the problem of double leadership would have to be discussed, the question of who was to hold the highest posts — party leader, Opposition leader, Shadow Chancellor — or whether they should all be held by one man.

But Stoltenberg believes that these debates would only be fruitful if in future they were held without confrontation.

"The policies and leadership of the CDU/CSU have priority. And positions must be filled in accordance with these priorities. Kohl, Albrecht, Stoltenberg — that is not for me to decide."

And to remove all doubts about the strictness of this maxim, he also provides the instructions for use: "I am not saying this and do not intend it as a tactical argument."

If Helmut Schmidt wins the election, Stoltenberg would undoubtedly play a

far greater part in national politics than he has done to date.

Stoltenberg faced a similar decision five years ago. In spring of 1975, he enjoyed strong support in the CDU/CSU. Leading politicians from north and south would have preferred him as Shadow Chancellor to Helmut Kohl.

But when, in the Schleswig-Holstein Land election, he won by only one seat he appeared before the TV cameras pale as chalk.

Had he won convincingly, the Shadow Chancellorship would have fallen into his lap, but all his hopes were shattered. Kohl, the beaming victor in the Rhineland Palatinate Land election and party leader, was soon afterwards elected Shadow Chancellor.

Stoltenberg did not commit himself very strongly to Kohl's election campaign, much to the disappointment of his political friends.

But this did not affect his reputation. As deputy CDU leader and party spokesman on finance and economic and energy problems he managed, even in remote Schleswig-Holstein, to avoid the fate of many Land Prime Ministers of sinking into comfortable obscurity in high office.

Stoltenberg has been an MP for 25 years, for four years he was Bonn Minister of Research, for 11 years Land Prime Minister. This experience now stands him in good stead. For every eventuality, in the foreseeable future, Stoltenberg has the best chances of replacing Strauss as Shadow Chancellor.

Stoltenberg's mastery of his field — finance and economics — is highly thought of, even in the Bonn coalition. He seems to be systematically reducing his gaps in knowledge of foreign policy — not by political tourism but by hard work.

No one doubts his capacity for leadership, making full use of his right to lay down the guidelines of policy. Wherever intellectual lucidity, hard work and clear judgement are required, Stoltenberg can be relied on to perform brilliantly.

On the other hands, he has no trace of charisma or even talent for moving speeches or fascinating presentation of ideas. At meetings people listen to him carefully and believe what he says but they hardly jump from their seats with enthusiasm.

Stoltenberg is an advocate of consensus democracy, not of confrontation, a liberal conservative who, by his stolidity and thoroughness, can influence the political centre — unlike Strauss.

And finally he is credited with the ability to persuade the Free Democrats to join a coalition. It is difficult to imagine affairs and scandals under his leadership.

For all these reasons, Stoltenberg enjoys great confidence in his party. From him the party expects a positive impulse north of the Main line especially where, as the North Rhine-Westphalia result shows, the CDU is most in danger of losing votes.

Strauss has said that if he wins the election, he will appoint Stoltenberg Vice-Chancellor and make him responsible for economics and finance. This is the field in which Stoltenberg wants to concentrate, his attacks on the Bonn coalition.

"Despite his great political competence, Helmut Schmidt is virtually neglecting the task of leadership," he says.

He criticises the fact that there was no change of course in financial policy, although the need for this was clear to everyone after the outbreak of the Afghanistan crisis.

Everyone knew, he says, that more would now have to be spent on foreign and defence policy. Stoltenberg wonders why Schmidt did not respond to the depressed mood of the people at the beginning of the year and explain the necessity for greater savings.

Instead, Bonn passed laws on noise abatement, youth assistance and other things which will place a burden of billions of DM on the *Länder*.

Stoltenberg says that the Brussels EC compromise on the reduction of the United Kingdom's contributions, and Bonn's inability to cut the cost of this

United in Opposition: Stoltenberg (left) and Strauss.

(Photo: Swiss)

from the current budget are signs.

Stoltenberg suspects that the Government will use the promised reductions — as compensation for EEC decision — also as a means of pressuring the *Länder* into giving a larger share of tax income.

Another criticism is that Bonn is doing enough to reduce the level of government debt, especially as the prospects for high growth rates are minimal.

What makes this in his opinion so serious is that the SPD insists on the issue. One group insists on need for growth; the other is increasingly sceptical about this.

Stoltenberg considers it "unfortunate" in the circumstances that the SPD committed itself to the 35-hour week. He says that this is an acceptable price for women and older workers but for all workers.

He said the 35-hour week had nothing to do with social progress. It introduced, it would mean an increase in wage costs. This would hamper export and cause great difficulties for medium-sized firms.

The highly successful Japanese, he says, work four weeks a year more than we do. He accused the Chancellor of doing nothing about these developments, despite his better judgement.

Stoltenberg's second line of attack on energy policies: "I see no signs of even of the [Bonn] government going ahead with a consistent programme of expanding atomic energy."

Bonn, he said, talked of coal liquefaction as an alternative to atomic energy, knowing perfectly well that development costs would amount to billions of DM, not planned for in the budget.

In foreign and defence policy, Stoltenberg wants to see the CDU stressing the importance of German relations.

He is worried about a new anti-Americanism and "count me out mentally" on the left. He said the CDU/CSU would have to make greater efforts to combat this attitude by sending its ideas on peace and defence more effectively.

Stoltenberg sees glaring weaknesses in the SPD in financial policy, atomic energy and NATO policy.

He says: "The great strength of the Opposition in the really central questions, by which I mean: NATO, energy and financial policy, is that it is not capable of action. It is not still internal disputes like the SPD?"

■ INTRA-GERMAN AFFAIRS

Day of Unity a misnomer with uncomfortable memories

The public holiday on June 17 which is known as the German Day of Unity is still a day of discomfort.

Its name is not even correct. The German nation is not united and is not likely to be in the foreseeable future.

Nor do we have any reason to "celebrate" the Day of Unity. After all, what there to celebrate in memory of an abortive uprising of German workers (in East Berlin on June 17, 1953) that was brutally put down with tanks and accelerated the East-West rift in central Europe?

Let us not forget that there is a link between the 1953 freedom demonstration and the sealing off of the GDR with the Wall that country built in 1961. The discomfort is not new. The political consensus after the 1953 uprising was short-lived, and the disputes over the meaningfulness of this holiday were stepped up — but not because of lack of respect for the aims and the victims of the uprising.

They were stepped up because we found it increasingly difficult from year to year to arrive at a political interpretation of this day.

The many committees that were to decide whether to keep or abolish the public holiday led to nothing. What remained can best be called pangs of conscience. An abortive liberation attempt in which we West Germans had no part anyway was turned into a paid holiday while over there in the other Germany people have to work as on any other day. Small wonder, then, that attempts to abolish the holiday have been made

time and again (some want to have it replaced by the day commemorating the proclamation of our Constitution). But the reasons in favour of retention have gained the upper hand.

We need gestures and symbols if we are to perpetuate the idea of unity. Without them and without such a commemorative day, we would have to worry even more about cities like Jena and Wittenberg disappearing forever in the remoteness of a foreign state.

Even so, there are also sound and honest political arguments in favour of abolition.

When June 17 was proclaimed a public holiday our politicians and their parties (be it rightly or wrongly) were still imbued with the hope of reunification.

Little by little, this hope has been replaced by the realisation that the two Germanies must come to some political arrangement.

The German question cannot be solved by majority decision and even less by force.

Bonn's new *Ostpolitik* and its *Deutschlandpolitik* under Brandt and Scheel (from 1969 onwards) were marked by the realisation that it is necessary to recognise the existence of a second German state and to pursue a diplomacy of patience and small steps.

As a result, the word "reunification" disappeared from the political vocabulary in Bonn.

This being so, the Day of Unity is even more out of keeping with the political realities of the past 10 years. Instead, we now cautiously speak of a

possible future order or of an imaginable "eventual reunification".

The fact that such a reunification is immeasurably distant is reflected in the reticence of our vocabulary.

The same applies to the theory of "two German states of one nation". This phrase was a handy formula for the new *Deutschlandpolitik* that was aimed at recognising the other Germany. It replaced the previous denial of the existence of such a state.

Chancellor Kiesinger still referred to the GDR as a "phenomenon".

The formula of a nation divided into two states made it easier to pursue a *Deutschlandpolitik* aimed at détente.

There is a long and impressive list of improvements in the relations between the people on both sides of the Wall — improvements which were only possible through the recognition of the GDR.

For instance, the annual volume of trade between the two has risen to DM10bn. Travelling has been simplified, and the number of visitors from the Federal Republic of Germany has risen to more than 3m a year.

And instead of the former one million there are now ten million phone calls between the two. The number of repatriates (including those whose freedom was bought for cash) has risen.

The list of improvements also includes official and unofficial visits back and forth and the ability of West German correspondents to report from the GDR — which, the regime, there tolerates with much gnashing of teeth.

All this is much more than we would have dared hope for 10 years ago. It would be unfair to permit the chicanery and repression in the other Germany to obscure our view of the many little gains that have been made with patient diplomacy.

By the same token, we must admit to ourselves that all these improvements have done nothing to promote unity.

Is the thesis of the unity of the nation not as much as in danger of palling as was the thesis of a reunification in peace and freedom?

The GDR has already deleted the term "German nation" from its constitution, and it adamantly denies that there is such a thing as two states of a German nation.

Helmut Schmidt once said that the nation retains its right to self-determination for as long as the will to be a nation lasts.

But does our nation still want to be a nation? Does it want unity with the same passion with which the Jews or the Poles have striven for nationhood?

Our Constitution calls on the people to "bring about the unity of Germany"; both how many of our schoolchildren know where the Saale River is?

History has denied us the comfort of demonstrating that a divided nation is unnatural. Past centuries saw the disintegration of the German empire as parts of it seceded and in their turn became nations with a history of their own.

In the same way, the GDR and the Federal Republic of Germany could one day become nations in their own right.

The useful formula of two states and one nation need not last forever. Nationhood is not a condition but a process of change.

Are we still a nation? Perhaps we have already ceased being the German nation — both here and there.

Béard Nelissen

(Hannoversche Allgemeine, 14 June 1980)

Arrested visitors in the GDR: case for a discreet Mission

weeks, and the Mission is working hard to shorten it.

Mission representatives may visit West Germans in prison. But the time lag between filing an application and receiving a visitor's pass is still too long (rarely less than four weeks).

Thirty staff members share the visit. As a rule, their visit, the prisoner's first contact with the outside world, takes place in a special visiting room at the prison operated by the State Security Service in Berlin-Lichtenberg.

A member of the Security Service or a public prosecutor is always present.

There are two things the Mission can do for a prisoner: it can look after his personal affairs (informing next-of-kin and employer, drafting powers of attorney and arranging social welfare where necessary).

It can also try to improve conditions of imprisonment. Such contacts have frequently resulted in marked improvements.

Prisoners short of money are given some cash by the Mission so they can make purchases in prison. Every time a Mission member visits a prisoner, he hands over a parcel with tobacco, fruit, toilet articles, etc. worth DM20.

The Mission has had little success in attempts to obtain permission to attend trials.

One of the main functions of Bonn's Permanent Mission to East Berlin is looking after West Germans and West Berliners imprisoned in the GDR.

Details of work with prisoners and progress in this field are outlined in a report handed to the Bundestag Committee for Intra-German Relations by Günter Gaus, the Mission head.

The report is dominated by the hope that improvements in German-German relations can be made by cautious, step-by-step diplomacy.

At present, the Mission looks after 366 prisoners, a gratifying figure considering that there were 500 in 1977.

The reduction in the number of prisoners is largely due to discreet efforts to achieve their premature release and to the diminishing number of arrests in connection with transit traffic (1978: 124; 1979: 79).

The reason for these arrests is largely legal provision peculiar only to the GDR, i.e. "aiding and abetting people intent on fleeing the Republic".

The GDR terms such activities "anti-state trade in human cargo".

Another reason for arrests is "illegal entry into the GDR". According to the Mission, almost all of these cases involve "careless or people actions, frequently under the influence of alcohol."

The GDR officially informs the Mission of arrests of West German citizens if these took place in connection with transit traffic to Berlin. The time lag is usually three to four days.

However, the Mission is dissatisfied with the GDR procedure on arrests of travellers visiting the GDR. Information of this type frequently takes up to two

The useful formula of two states and one nation need not last forever. Nationhood is not a condition but a process of change.

Are we still a nation? Perhaps we have already ceased being the German nation — both here and there.

Béard Nelissen

(Hannoversche Allgemeine, 14 June 1980)

Those who go along are usually left in peace.

Prisoners have to work and are paid 120 marks a month.

Many are sick, and many suffer psychologically to the point of being no longer fit for prison.

The report states the reason: "The prisoners are at the mercy of an alien social system which they reject; they are cut off from their accustomed environment by more than just prison walls."

"Most have been sentenced for acts which, in our legal system, are neither criminal nor wrong. Moreover, the sentences are disproportionately stiff, so that the prisoner must feel that he is being punished in lieu of the Federal Republic of Germany."

Nine of the prisoners cared for by the Mission are lifers; 23 are serving 15-year terms; 30 are in for 10 to 14 years and 106 for five to nine years; 51 are serving sentences of less than five years.

The charges, according to the GDR, are 56.8 per cent "aiding and abetting people intent on fleeing the Republic"; 11.7 per cent "espionage"; 3.4 per cent "traffic offences"; 15.1 per cent "border violations" and 5.6 per cent "violations of customs and foreign exchange regulations".

Bonn hopes that the extremely difficult negotiations on a legal aid agreement with the GDR (the difficulty lies in the question of German citizenship) will, at least indirectly, lead to some improvement of the prisoners' lot and, perhaps, reduce their number.

Helmut Harles

(Frankfurter Allgemeine Zeitung, 14 June 1980)

INDUSTRIAL RELATIONS

Court confirms legitimacy of the lockout as an employers' weapon

The Federal Labour Relations Court has ruled that lockouts as a countermeasure to selective strikes are permissible. The court headed by the presiding judge, Professor Gerhard Müller, held that, for reasons of equality, employers must have the necessary weapons with which to defend themselves in certain circumstances.

The Federal Labour Relations Court has now passed its third ruling on the legality of lockouts. And for the third time it confirmed them as legitimate measures in labour disputes.

But this third ruling is the most important of the three because it does not concern mini disputes involving very small groups of workers.

The ruling dealt with the 1978 industrial action in Baden-Württemberg's metal industry where employers locked out 146,000 workers in retaliation for a strike by 104,000.

The ruling also dealt with the industrial action in the printing industry where the employers responded to selective strikes by 2,281 workers in four companies with a nation-wide lockout of 32,735 people in 327 companies.

The printing industry said this was a war of annihilation. The doggedness with which the unions have been fighting against lockouts must be seen in historic dimensions.

In the early days of our industrial society, strikes were the only weapon workers had in their fight for better working conditions.

Strikers were frequently beaten up by police and army while employers de-

fended themselves with lockouts. It was not until the mid-1920s that labour disputes developed into compromises rather than confrontations.

But the danger of confrontation grew again as the unions developed new strike methods in the form of selective strikes to save strike money and the employers reacted with lockouts. Such action was reminiscent of the early days of industrial action.

The latest ruling by the Federal Labour Relations Court is a milestone of labour relations legislation and social policy in the more than 100-year history of industrial action. It is a Solomon-like ruling which will both satisfy and irritate both parties.

Those who believed that the court would ban lockouts were wrong in their assessment of our society.

The autonomy of the parties to collective bargaining can only be preserved if there is no legal corset and if both sides have equal means at their disposal in negotiations and in labour disputes. And this includes lockouts.

So much for the principle. The employers' argument was sustained by the court and that of the trade unions rejected.

But presiding Judge Professor Gerhard Müller, unlike the employers' associations, attributed different weight to strikes and lockouts.

While the right to strike is a necessary part of labour disputes, this cannot be said in equal measure for lockouts.

The court reasoned that the employers and their associations depend much less

than the trade unions on the instruments of industrial dispute in lending emphasis to their claims.

The balance of power would be upset if the employers had equally effective weapons at their disposal — weapons that would make any strike intolerably risky.

Judge Müller thus aptly described a social situation in which the trade unions are no longer underdogs but a powerful element of a community in which the employers, backed by capital, nevertheless have the power of forcing the unions to their knees in a major confrontation.

The fact that such a development is unlikely in our democratic state is neither here nor there.

The court only drew the limits for industrial action in a free country and a liberal economy.

Key term here is the "proportionality of means" — a term which was used in the second lockout ruling of this court in 1971. In fact, Judge Müller is the corner of this term.

It is to be hoped that the employers in Baden-Württemberg's metal industry will bear this in mind. They used to hit much harder in former years. This time, however, they remained within limits which Judge Müller in his summary called exemplary: when a strike in a specific area involves less than 25 per cent of the workers, the number of locked out people should be lower.

The printing industry failed to meet this yardstick because the ratio of strikers and locked out workers was 1 to 14.

This was clearly at odds with the principle of proportionality of means and therefore illegal.

The court also ruled the selective lockout of union members only because it violated the constitutional guaranteed freedom of coalition.

It was thus a split ruling, turning down the lawsuit of the Metalworkers' Union and upholding that of the Printers' Union.

The court thus approved of lockouts by distinguishing between various forms.

There was nothing dogmatic about the ruling, and union attorney Gerhard Müller aptly remarked in court: "We must not be too hasty to aggravate the structural and overlook the facts of life when this is a pragmatic ruling based on justice, analyses the problems arising from the enlargement of the Community."

It was a pragmatic ruling based on insight: that total balance cannot be achieved in a dynamic society and no legal system can therefore demand that the ruling therefore make legal certainty in our era?

Employers and unions will have a lot of thinking about the consequences of the ruling. The action by the print industry is unlikely to be repeated.

parties to collective bargaining will ponder the question whether strikes and lockouts have not become obsolete in a society where workers and employers can be affected nation-wide because there is a labour dispute in progress in Baden-Württemberg.

Judge Müller has tried to get the parties to collective bargaining to agree on rules for labour disputes.

Out of court, he raised the question whether we should not consider an entirely new system as a means of arriving at wage deals. But employers and unions are still far removed from such ideas.

On the contrary, they are pondering new strategies and tactics in labour disputes. It is too early to file away this issue.

Heinz Michels
(Die Zeit, 13 June 1980)

BP Germany unveils pioneer profit-sharing scheme

of the scheme with the late Jürgen Ponto, then chairman of the Dresdner Bank.

Herr Banse: "But we first had to get out of the phase where we had to struggle for survival. As long as BP was in the red and, as was the case in the mid-1970s, we had to fear that our British parent company would lose interest in its German business, there was little point in discussing such plans."

"However, when the staff is as motivated as ours was during the crisis we know that we have enough support to promote staff interests."

In fact, staff motivation was what motivated Herr Buddenberg.

"Personal involvement on the part of our staff is an important prerequisite for the company's success and for the staff members themselves in developing their personalities," he said. "I want them to enjoy their work and to have an interest in the company."

Buddenberg hopes that his initiative will act as an icebreaker and will hasten the decision of other companies to evolve similar profit-sharing schemes.

In order that the staff should not lose interest in the company's performance in times when business is not exactly spectacular, as was the case in 1979, the scheme becomes operational even if profits are very small and before any dividend is paid to the shareholders.

The calculation of shares of profits that will go to the shareholders and the staff takes place in three phases:

• To start with, the staff gets one per cent of annual profits shown in the balance sheet based on their annual income (basic plus extras). The shareholders also get one per cent on capital. For this first phase, it suffices for the company to make only a minimal profit of DM14m, given present salaries (about DM300m) and the capital of today (DM1.1bn). Last year, BP made a profit of DM200m.

• Then adequate interest on capital is calculated, using the interest rate of fixed interest securities as a guideline.

• Last, the profits that remain are divided up in such a manner that every staff member gets an additional profit sharing, sum of up to a maximum of four per cent of his annual income. The remainder goes to the shareholders.

The profit sharing bonus is transferred separate from the salary and is fully taxable.

Herr Buddenberg concedes that it might seem illogical to give the staff a portion of profits although they are anyway paid for the productive work they have done while shareholders get nothing initially.

"But we have deliberately done it this

way because, on the other hand, the staff members' profit sharing has an upper limit whereas the shareholders' doesn't," he said.

But then the staff's participation in the sharing losses is also limited. They are not free having to fork out in bad years. Their share of losses is carried forward to the following year and offset against possible profits. And should there be a longer period of poor business, the staff's share of losses is carried for a maximum of two years.

Herr Buddenberg is confident, however, that all this is only theoretical. "We shall try even harder than before not to have any losses. But should we get into the red anyway we'll get all of it again as soon as possible."

Herr Buddenberg hopes that after two or three good years he will be able to start on the second tier of his model.

Once BP Germany has demonstrated its success to the public, he hopes to convert it from a 100 per cent staff subsidiary into a mixed-ownership company.

"A part of the capital is to be offered to German buyers. Moreover, the staff will then be able to combine profit sharing with participation in the capital of the company. Any staff member prepared to invest half of his profit sharing bonus in BP shares will be given an equal share of profits."

This means that a worker with an annual income of DM50,000 would receive a profit sharing bonus of DM300 in the first phase, to be augmented by another DM300 in the second phase.

Continued on page 7

THE EEC

Initial hurdles for an enlarged Community

How soon did the EEC governments take the budget-share hurdle that was put in their way by London that they were faced with new problems: Greece's accession to the Community on 1 January 1981 and Spain's (probably) in 1982 are aptly remarked in court: "We must not be too hasty to aggravate the structural and overlook the facts of life when this is a pragmatic ruling based on justice, analyses the problems arising from the enlargement of the Community."

Although Roy Jenkins, the president of the Commission, told Spain's Prime Minister Adolfo Suarez last December that all would be done to complete the accession negotiations with Spain by the end of this year, the schedule looked quite different at the end of May.

It provides for the settlement of all "simple" issues by the spring of 1981. The actual negotiations on provisions for the gradual integration in the common agricultural market of Spain and Portugal are to come after the French elections. The same goes for the settlement of the financial issues.

The Accession Treaties are to be signed by mid-1982 at the latest to give the parliaments time to ratify them so that the third enlargement of the Community can take place in 1983 or the beginning of 1984.

The governments in Athens, Madrid and Lisbon hope that joining the EEC will buttress democracy in their countries because no dictatorships may be members. They also expect economic benefits and a "scapegoat" should rapid modernisation lead to social unrest.

And the Nine hope to improve their security by tying the three southern countries to central Europe. They also hope to shore up democracy in the new member nations; but they realise that they will impose an economic burden.

Significantly, both the Bonn Ministry of Economic Affairs and most economic research institutes in Germany have voiced considerable reservation.

As a result of the Association Treaty, Greece has been a quasi member since 1961. The country's economic development in the past few years has been remarkable and there will be no major problem in integrating Greece's agriculture.

But the opening of the Greek market for EEC and EFTA goods, as well as products from the developing countries (due to the Community's trade policy) combined with the lowering of tariffs for Japanese and American goods, brings

It is generally felt that the Greeks will to themselves "let's first get in, then we can negotiate about everything."

Lisbon is still traumatised by the massive British attempts — first by Harold Wilson, then by James Callaghan and now by Margaret Thatcher — to change the rules once in the club.

The apprehension is one of the reasons why the EC Commission and the Nine are trying to be more thorough in their negotiations with Madrid and Lisbon.

Lorenzo Natali, the Italian vice-president of the Commission who is in charge of the enlargement, does not want to dramatise — unlike many of his fellow countrymen.

He says: "We must realise that the problems we already have in the Community — unemployment, agricultural surpluses, production and the restructuring of industry — could worsen as a result of

the enlargement, not to mention the other problems that go with it."

The improved trade between the Community and the new members will benefit the already developed region, says Signor Natali, and make the problems of the under-developed ones worse.

Although Roy Jenkins, the president of the Commission, told Spain's Prime Minister Adolfo Suarez last December that all would be done to complete the accession negotiations with Spain by the end of this year, the schedule looked quite different at the end of May.

It provides for the settlement of all "simple" issues by the spring of 1981. The actual negotiations on provisions for the gradual integration in the common agricultural market of Spain and Portugal are to come after the French elections. The same goes for the settlement of the financial issues.

It is generally felt that the Greeks will to themselves "let's first get in, then we can negotiate about everything."

Lisbon is still traumatised by the massive British attempts — first by Harold Wilson, then by James Callaghan and now by Margaret Thatcher — to change the rules once in the club.

The apprehension is one of the reasons why the EC Commission and the Nine are trying to be more thorough in their negotiations with Madrid and Lisbon.

Lorenzo Natali, the Italian vice-president of the Commission who is in charge of the enlargement, does not want to dramatise — unlike many of his fellow countrymen.

He says: "We must realise that the problems we already have in the Community — unemployment, agricultural surpluses, production and the restructuring of industry — could worsen as a result of

the danger of excessively tough competition for Greece's domestic business.

Moreover, the gradual raising of agricultural prices to Community levels will have an inflationary effect. The cost to the Nine of countering this could be very high.

Portugal, which has roughly the same population as Greece (9 million) is considerably poorer. Its economic position has been appalling ever since it lost its colonies.

The Community and the individual members have been lending a helping hand in the form of credits since 1976.

Portugal's industry consists mainly of small companies which will now also receive EEC credits to the tune of about DM130m.

A ray of hope lies in the fact that the state-owned French car manufacturer Renault intends to build a plant in Portugal.

After joining, Portugal will have to import food (sugar and animal feed) from the EEC instead of buying it on world markets. This, together with rising agricultural prices at home, will speed up inflation.

Portugal will also contribute to Community surpluses, adding to the wine lake and the tomato mountain. It might also add to meat surpluses because the high Community prices would prove an incentive to produce more.

It will have to be subsidised from EEC coffers for many years unless growth is promoted by private investors from the Community and the United States who might be attracted by the low wages.

The membership candidate that really makes the Brussels Eurocrats shake in their boots is Spain, the highest developed and the most populous (36 million) of the three. Some of its industry could well create redundancies in the northern EEC nations.

Ninety three per cent of Spain's businesses employ fewer than 25 people and they are likely to be hardest hit once Madrid has to reduce its tariff barriers.

Spain's unemployment rate, now 10 per cent, is likely to rise. This may, however, be mitigated if such multinational giants as General Motors and Ford carry out their investment plans in Spain. Of course, this would mean additional competition for the established motor industry in the Community.

Spanish shipyards and parts of the steel industry are highly competitive. Growth rates in the country's electronics industry are good. But this branch of business would like to continue enjoying the protection high import duties offer because — like Spain's chemicals industry — it is still in the infancy stage.

Moreover, British business has so far shown less understanding than their German counterparts for this type of staff participation.

There are, after all, several hundred medium sized companies in this country which have profit and capital participation schemes, and politicians of all parties have been promoting this, though without much success.

Works Council Chairman Banse: "Our London people have watched with great interest and, indeed, respect the progress we've made in the past few years."

"As a result, they now trust us to do the right thing with the profit sharing scheme as well."

Michael Jungblut
(Die Zeit, 13 June 1980)

try — it still feels unequal to the task of competing with foreign products.

Unbiased studies see the major handicap of Spain's industry in the fact that it has for decades been protected from foreign competition and that its management is not competition-oriented.

These problems are further aggravated by excessive social security payments.

To keep unemployment at the present level, Spain will have to create 160,000 new jobs every year.

The integration of Spain's agriculture into the EEC market is a major problem. That country will account for one-third of the agricultural population of the Twelve.

The wine surplus resulting from the three new members is likely to amount to between 5 and 10 million hectolitres a year. But this problem is not as grave as that posed by Spanish olive oil, the production of which involves two million farmers.

Raising the olive oil price to present Community levels would cost the EEC DM3.8bn a year. So far, Spain has been maintaining its olive price at a high level artificially by heavy taxes on all other vegetable oils.

But olive oil, citrus, wine and tomatoes from the three new member nations will also pose a problem because producers in Israel, Cyprus, Morocco, Algeria and Tunisia will find it hard to sell on Community markets.

Since the EEC has cooperation treaties with these countries which provide for facilitated imports, they will have to be compensated through financial assistance. Preliminary talks are already in progress.

Freedom of movement for Community workers will not be granted instantly to the new members. A seven-year transition period is envisaged, though Madrid opposes this.

This dispute can only be solved by swiftly creating hundreds of thousands of jobs in the three new member nations themselves through regional subsidies.

A group of Social Democratic Euro-MPs, among them Helmut Wiczorek-Zeul, Gerd Walter, Gerhard Schmidt and Thomas von der Vring, wants to maintain close contact with MPs in Madrid and Lisbon to ensure that the social consequences of the enlargement are taken into account when drafting the treaties.

This would apply to the consequences to workers in the old and the new member nations. These Euro-MPs hold that this would not hamper but promote the political objectives.

Erich Hauser
(Frankfurter Rundschau, 14 June 1980)

■ AVIATION

Europeans gain ground
in crucial US market

European aircraft manufacturers seem finally to be making headway in North America. The Munich-made BK 117, a nimble, versatile helicopter, is following in the footsteps of the Airbus, the commercial jet that wiped fond smiles off US manufacturers' faces.

For years it has been generally accepted that unless you can sell your aircraft in North American markets your chances of survival in the aircraft manufacturing business are nil.

This is a lesson all European manufacturers have learnt. Marcel Dassault's Mirage jets, although masterpieces of European aero engineering, only made the grade because they sold well in America.

The Airbus did not really start earning big money until sales managers in Toulouse managed to clinch a deal with Eastern Airlines, the major US domestic operator based in Miami.

By the same token (but the other side of the coin), the VFW 614, Germany's first commercial jet airliner, flopped when it failed to establish a foothold in the American market.

This, then, is the hard-nosed commercial background against which the staggering success of the BK 117 Hummel helicopter, jointly designed and manufactured by Messerschmitt-Bölkow-Blohm in Germany and Kawasaki Heavy Industries in Japan, must be seen.

The helicopter is taking US markets

by storm, and it is a surprising success story, considering Bell Helicopters of Fort Worth, Texas, reportedly command 60 per cent of world markets.

Ever since the Hummel (it means bumble-bee in German) started whirling its rotor blades life has been topsy-turvy for experienced and successful US aircraft designers and sales staff. They just cannot figure out what has gone wrong with the world.

So far only two prototype Hummels are flying, and series production of the 275km/h (172mph) whirlybird is not due to start until later this year. Yet the output has already been sold until the end of 1983.

What is more, more than 70 per cent of the 135 Hummels that are scheduled for completion in either Germany or Japan over the next three years have been bought by US customers.

Making good helicopters has come to represent good business. In the North Sea alone the demand for helicopters to service offshore operations is expected to be at least 2,000 this decade.

At present fewer than 200 ply between Norway, England, Scotland and the Continental coastline. Worldwide, but excluding the communist countries, the demand for helicopters large and small is expected to increase steadily this decade to a total for the 80s of between 25,000 and 30,000.

There is no mistaking the trend

Vertical rise in the market: the BK 117 Hummel.

towards larger units with a more substantial payload capacity, and this is what promises to make the BK 117 such a money-spinner.

The 135 advance sales of BK 117 eight- and ten-seater helicopters have been mainly to American customers. The unit price will be \$1,024,000 until 1983, then increasing to \$1,150,000.

For decades German and European aircraft manufacturers have relied on government grants from the taxpayer's pocket to stay in business, but this has not been true of either the BK 117 or its helicopter predecessors from MBB's Ottobrunn, Munich, works.

More than 1,000 of the previous model, the BO 105, have been sold, and about 500 are already in use in 30 countries and four continents. Five hundred is roughly the break-even point, so from now on the BO 105 will be earning good money.

Ironically enough, the world's largest aircraft manufacturer, Boeing of Seattle, runs a BO 105 from Munich as its works and VIP chopper and not, as might be expected, a Bell, a Sikorsky or, for that matter, a Boeing.

And there is no present prospect of the BO 105 boom ending either, although the Munich manufacturers have had their difficulties at times.

The BO 105's teething troubles undoubtedly included engine failure and maintenance costs that were too high. But Kurt Pfeleiderer, head of MBB's helicopter division, says:

"We anticipate sales of 1,500 units in all over the years to come and now reckon 2,000 BO 105s sold is no longer mere wishful thinking."

Herr Pfeleiderer is a canny, cautious Swabian and not the sort of man given to giving less than his considered opinion. So his sanguine forecast carries weight.

Unlike the BO 105, the BK 117 is first and foremost a multi-purpose helicopter for civilian use. It is 13 metres long, 3.84 metres tall and has a range of 545 kilometres, making it an ideal executive whirlybird.

This is not to say there will never be a military version or versions. There is, in any case, no aircraft to rival the helicopter for versatility and the speed at which it can be converted.

Like its predecessor, the BK 117 will be used in many cases for air-sea rescue and disaster relief operations. In others it will, again like the BO 105, be used as a police helicopter.

MBB and Kawasaki Heavy Industries, who signed an agreement to join forces in manufacturing the versatile BK 117

in 1975, opted for the joint-head principle that has proved successful in the BO 105.

In this respect the Hummel is identical with the military version of the BO 105. Power is provided by two Lycoming LTS 101-650 B1 shaft engines developing 650 shaft power, or 485 kilowatts, each.

Many other details were taken from the BO 105, including the tailfin and the stabiliser, but these were redesigned for the BK 117.

The manufacturers sincerely hope as a result the new chopper will have fewer teething troubles than its predecessor.

The first BK 117 prototype made its maiden flight in Ottobrunn, Munich, on 13 June 1979. The first 6 to 10 by the World Meteorological Organisation helicopters are scheduled for delivery in 1981.

In 1982 a further 50 to 60 will follow, and by 1983 annual unit production should have reached 100.

"We are counting on building at least 1,000 BK 117s in the years ahead of course, on selling them too, which is much more important," says Herr Pfeleiderer. His optimism is based on market research. The confidence in the BK 117 has taken shape in American counterparts.

He and his Japanese opposite numbers are quietly confident the BK 117 will prove more than a match for Bell 222, a 10-seater all-rounder.

At the Las Vegas helicopter fair last year options were taken out on 30 BK 117s straight away, even though they were still on show.

There is another important reason for this flying start. "We never imagined the success story so far has been due to a small extent to the exemplary cooperation between our two companies in handling the project."

The first balance sheet is impressive. The European Airbus has already been sold as a brisk seller and serious competitor of US aero giants. The BO 105 triumph now seems about to be followed by a BK 117 boom.

US competitors take a jaundiced view of the entire operation because of the man-Japanese co-production seems to make more of a mark on American markets than either country could expect to do on its own.

Joint action is necessary and three possibilities were discussed at the conference. The first was that of filtering

THE ENVIRONMENT

Concern over increasing
carbon dioxide count

Two dozen scientists and politicians from 15 countries met recently at Aspen Institute workshop in West Virginia to discuss the alarming increase in carbon dioxide in the atmosphere, an increase of 15 to 20 per cent since the turn of the century.

Carbon dioxide is generated as a by-product of combustion. In the quantity in which it exists in the atmosphere it does not yet, as far as is known, represent a danger to either animals or man.

So there are no statutory limits to the amount that is poured into the atmosphere. Yet in the long term a continued increase in the carbon dioxide count could well bring about a crucial change in the earth's heat balance and climate.

Latest surveys indicate that the carbon dioxide is fairly evenly distributed in the atmosphere, where it allows short-wave solar radiation through to the earth's surface but prevents the outflow of long-wave infra-red radiation reflected from the surface of the earth.

This is the so-called hothouse effect first described in the 19th century by a Swedish scientist. If the carbon dioxide continues to increase, average earth temperatures will increase too.

Consequences of this foreseeable development and essential counter-measures were discussed at the Berlin gathering, which was sponsored by the parent Aspen Institute in Aspen, Colorado, and 13 June 1979. The first 6 to 10 by the World Meteorological Organisation helicopters are scheduled for delivery in 1981.

Professor Bach of the Applied Climatology and Environment Studies Centre at Münster University outlined at a press conference assumptions scientists made on the basis of estimated future energy consumption.

The current atmospheric carbon dioxide count of roughly 0.033 per cent could be expected to double over the next 50 years, he said, resulting in a mean global temperature increase of between 1.5 and 4.5 degrees centigrade.

Such estimates were, he admitted, fraught with uncertainty. The role of the oceans as carbon dioxide absorbers had yet to be clarified at all satisfactorily.

A temperature increase of less than one degree, he said, could be assimilated by the earth without undue difficulty or serious consequences.

Yet estimates assume that temperature increases at the earth's poles will be three to four times above average, resulting in polar icecaps melting, higher sea levels and changes in climate circulation.

This would mean changes in rainfall, evaporation and ground humidity distribution, with attendant consequences for agriculture and food output for a growing world population.

There would be countries that gained from this temperature change and others that lost. The United States, for instance, would probably be a loser, whereas India seemed likely to prove a winner, with more rainfall.

In the Soviet Union, the growth period would be longer but rainfall would be down. So the carbon dioxide problem, conference delegates stressed, is a universal problem.

Joint action is necessary and three possibilities were discussed at the conference. The first was that of filtering

energy consumption if they were to make any headway whatever towards development. Walter Orr Roberts, director of the Aspen research programme on food, climate and the future of the world, wondered whether the developing countries, having already paid a high price for atmospheric pollution by the industrialised world, were not entitled to the first option on such cheap energy as remained. There must certainly be a plan of action stipulating carbon dioxide output ceilings, with quotas allocated on moral grounds to the various parts of the world.

Marion Kern

(Der Tagesspiegel, One of the main attractions at the Hanover show is this fireman's ladder which can extend to 63 metres.

Firefighting robots on show
at international fair

Firefighting robots were among the exhibits at Interschutz '80, the international firefighting and disaster relief trade fair in Hanover.

More than 460 exhibitors from 17 countries demonstrated on more than 66,500 square metres (17.25 acres) of floor space the entire range of emergency service devices.

They included the Scorpion, a robot handling device developed by Karlsruhe nuclear research centre and commissioned by the Bonn Research Ministry.

At the Hanover fair this sturdy tracked vehicle could be seen trundling up to a fireman and gently lifting the helmet off his head.

In practice the Scorpion has already been used in reactor emergencies in Austria and the Netherlands.

Red is the color of the fire brigade and it was the colour of most exhibits. They fascinated both the experts and the general public.

Remote-controlled fire extinguisher with camera shows it paces at the Hanover show.

Handelsblatt

WIRTSCHAFTS- UND FINANZZEITUNG

They included a sophisticated, high-speed airport fire engine costing over DM1m and veteran hand pump devices as used between 1450 and 1800.

The DM1m air crash tender can pump 9,000 litres of water and 1,000 litres of foam on to the blazing plane. It weighs 28.5 tonnes and has automatic controls.

Disaster relief exhibits ranged from field hospitals to meals on wheels. The latest fire engines pointed the nozzles of their hoses in impressive array. Protective clothing for all manner of uses was on show.

An Italian fire engine was claimed to ensure 100-per-cent success in fighting fires caused by carburettors, and Molotov cocktails.

Then there is a 150-tonne Bundesbahn crane that hoists a 63-tonne diesel locomotive as though it were a toy train. Two men can make the gigantic device turn 180 degrees effortlessly.

The locomotive is then lowered on to the track to a round of applause. Its bogies have come to rest on the track true to the nearest millimetre.

Firefighting demonstrations on a 1 in 10 scale model size could be seen in a neighbouring hall where Wiesbaden firemen showed model firefighting exercises as they will have taken place around 1910 and between 1500 and 1850.

Collectors will also have been delighted by displays of helmets, uniform badges, model fire engines and firefighting postage stamps.

The most expensive item of this kind was a French helmet costing DM300 and made of high-grade steel. A scale model of a steam-powered Mississippi fire engine was on sale at about DM100.

Cartoons take honours in TV festival

This year's Prix Jeunesse children's TV film festival in Munich was a triumph for Westdeutscher Rundfunk and its children's film director Gert K. Münterfering, who won two main prizes. The prize-winning films were two cartoons entitled *Oh wie schön ist Panama* and *Als die Igel größer wurden*.

Oh wie schön ist Panama is about a bear and a tiger who set off one day to find Panama, the land of their dreams. At the end they are back at home again, but they believe they have found Panama because — and this is the moral of the story — Panama is wherever one feels at home.

The film is based on a story by the well-known German Children's book author Janosch. The story won the 1979 German Children's Book Prize.

Janosch can certainly be well pleased with this version, which not only preserves the charm, humour and warmth of the original but if anything enhances it thanks to skilful animation and good speakers.

There were some complaints about the tiger's childish-female voice on the grounds that this was a perpetuation of an anti-empowering role cliché. The objection was registered and then forgotten.

The idea for the Igel film came from the WDR children's programme team and graphic artists Franz and Ursula Wintzensen.

The film tells the story of super-hedgehogs with steel-hard spikes which can even stand up to car tyres, thus saving them from bloody deaths on the road.

When this film was first broadcast Frankfurter Rundschau wrote that it "was a highly imaginative and aesthetically enjoyable experience."

Cartoon technique is used here "as an artistic means of telling a story which contains real and imaginative elements, and to tell it in such a way that it seems credible — which does not mean real."

Both films are undoubtedly successful examples of their category, yet one could have wished for a greater range to be covered in the awarding of prizes.

Story-telling does not just mean animating amusing and delightful cartoons for small children; it also means shooting real-life action films for juveniles.

An example of this kind was *Mysz* (The Mouse), a Polish production that came last behind the hedgehog film in third place.

It tells the tale of schoolchildren, young people, and the problems they have among themselves. It is a film with which juvenile viewers can readily identify and which they are happy to discuss.

One of the presenters of the Munich competition, Hendrik Schmidt of *Evangelischer Presse-Dienst*, Frankfurt, reiterated at the end of the proceedings what members of the jury had evidently commented all along.

There were, he said, too few programmes for juveniles that dealt with their real problems, especially in connection with the working world.

There were also no entries whatever in a category that a few years ago was overrun by programmes for children of pre-school age.

Yet programmes aimed at small chil-

dren were award-winners, and not only Panama in the story-telling category but also *Flügge*, a Yugoslav entry that was awarded a prize in the music and entertainment bracket.

This Yugoslav film was most highly rated of all individual entries and carried power of conviction by virtue of its imaginative character and the easy good-humoured way in which it put across simple concepts and facts about the environment.

Zum Klängen bringen, an imaginative pantomime entry by Swiss TV, was watched with similar fascination. Two mime artists demonstrate the sound of kitchen equipment in such an imaginative and captivating way that viewers are tempted to join in.

This Swiss entry was similarly awarded a prize in the music and entertainment category, the third prize-winner being *Reggae*, a combination of information and entertainment for young people put together by Austrian entrants.

The only misgivings members of the jury had was that the Austrian film might take too lax a line in its attitude towards narcotics. Had it not been for this feeling, *Reggae* might well have fared even better.

The Book Tower, an entry by ITV's Yorkshire TV of Leeds, England, won an award in the information category. It is similar in many ways to the Westdeutscher Rundfunk series *Lemmi und die Schmöcker*.

Books for children and young people are presented in short acted scenes or animated episodes. A presenter links the various entries with a flow of objective information and gags.

A prize in this section was also awarded to *A Journey into Infinity*, entered by Sweden. In an effective combination of film footage, still photos and animation it shows "what we know today about the origin, development and extent of the universe and about the laws of nature that govern it."

In terms of the overall quality of entries the Scandinavian countries were, as ever, well ahead of the field. They were responsible for 5 of the 18 prize-winning productions in all three categories.

The East bloc, in contrast, had nothing much to offer this year. Neither Czechoslovakia, a country with a TV reputation, nor the Soviet Union, neither the GDR nor Bulgaria nor Hungary came anywhere near the level of prize-winning entries.

Only Yugoslavia won a prize, though Poland came very close. The Third World had a number of impressive entries, though impressive only in the sense that they were produced under extremely difficult conditions.

This makes any comparison with far more experienced and better-equipped TV nations such as West Germany and Scandinavia invidious.

A Kenyan producer complained that he and his Third World colleagues could not compete with the technically brilliant works of the industrial nations. This was undoubtedly discouraging for him and for his colleagues from Africa and Latin America.

The best answer to these complaints was that two special prizes went to African productions. The Unicef prize went

to Kenya's *The Tender Ones*. The Prix Jeunesse Foundation Advisory Board Prize went to the Ghanaian production, *Who is to blame?* The Unesco prize went to Israel for *Pillar of Salt*. This year for the first time some prize-winners were selected by computer: 89 entries by 290 TV directors and producers were shown and at the end participants and public were asked to vote for what they thought were the best works. The computer did the rest. The judges again criticised the fact that in many TV films boys rather than girls are the heroes and that

Growing up in pre-war Berlin: from 'Die Kinder aus Nr. 67' (Photo: Bodo)

Realities of politics face pre-war children

Die Kinder aus Nr. 67 is the story of two boys growing up in the Berlin of the last year of the Weimar Republic.

The film opens with the boys, Erwin and Paul, hauling a Nazi flag down from one of the windows in the flat. But in the end, politics divides them and they go their very different ways.

Times are very hard, but Paul and Erwin are not bothered — they are saving up for a real leather football instead of the limp ball of rolled-up socks they use now.

They tear the stolen swastika flag and make shoe-cleaning rags out of it. Then they are off down to the underground stations to shine shoes.

Or they collect horse dung off the streets and sell it to gardeners. They put all their earnings into a well-hidden savings box.

This idyll of the backyards of Berlin is, of course, overshadowed by the signs of the times. Erwin, Paul and their friends fight with a Hitler Youth group who move into their meeting place, a disused factory.

Erwin catches Paul stealing bread rolls but instead of telling the police and pocketing the reward he gives part of his savings to his hungry friend. When Paul's out-of-work father is about to be visited by the bailiffs, Erwin turns a children's fancy dress party into a collection and they just manage to stop the family being evicted.

When at last the two boys can afford to buy the long-awaited football, it has lost its meaning. Paul joins the Hitler Youth, Erwin and his family join the resistance.

Directors Udo Barthelme-Weller and Werner Meyer, whose first film this is, use an insert technique to underline a time difference of half a year in the film. This was not really necessary.

Life in the backyards from the boys' point of view and the concentration on ordinary everyday living without spectacular private or national dramas effectively illustrate the subtle, gradual, tentacle-like hold dictatorship takes.

The film's major achievement is that it awakens interest in these things. Social conditions, unemployment and all the material cares these workers are

subject to make it only too clear the SA must have been an escape refuge for many of the men, all temptations of the Hitler Youth will group warmth must have been great to the boys.

This anti-fascism comes over clearly in the fancy-dress party. Suddenly, uninvited, a few uniformed men appear — one of them lives in the house.

There is no immediate and violent fight, as we have come to expect in films. Nothing specific happens. But contrast between the uniforms and costumes, the dissonance between games of the backyard child and the heel-clicking men in uniform puts a immediate damper on the joy of the party.

Indeed the film is marked through by a refreshingly low-key approach to calm accuracy. The film, though by means expensively produced, is remarkably authentic because of great attention to detail: the atmosphere of the backyards is perfectly captured.

The children, as long as they are moving, are excellent actors, and production undoubtedly owes much to the unobtrusive precision of camera Jürgen Jürgens (to whom many other debutant film makers have cause to be grateful).

The film, based on the classic book of the same name by Leo Janz, written in 1932, is not an *Altzeitfilm* on the political past. It has too many gaps for that.

Most young people watching it will probably be baffled by throwaway references to the "unity front" and "general strike."

SA and Hitler Youth will seem vague organisations to them, they are unlikely to grasp the subtle distinctions between the two living at the front and those at the back of the blocks of flats. It is up to teachers and parents to fill in the gaps and ground.

The film's major achievement is that it awakens interest in these things. Social conditions, unemployment and all the material cares these workers are

LITERATURE

Writers' letter maintains the political tradition

When Helmut Schmidt compared the current international crisis to the world situation in August 1914, German writers wrote him an open letter.

They called on him and his government to bear in mind the Germans' special responsibility for peace "given Germany has twice laid waste the continent in two wars."

The letter, signed by Thomas Brasch, Günter Grass, Sarah Kirsch and Peter Schneider, reminds us of Brecht's warning in 1951: "Will we have war?" he asked, and answered: "If we arm for war we will have war." "Will Germans shoot Germans? If they do not talk to one another, they will shoot at one another."

Brecht's open letter to German artists and writers ended with the famous warning: "Great Carthage waged three wars. It was still powerful after the first, it was still habitable after the second, it disappeared from the face of the earth after the third."

So the letter from the four writers is part of an honourable, though completely ineffective German tradition of political commitment by writers.

The First World War started, we are told, in the Serbian city of Sarajevo, the Second World War in my home town of Danzig: now they say Tehran will be the start of the third... it is true, that is how far mankind has come, it can count to three.

These words are quoted from Grass's book *Kopfgeburten oder die Deutschen sterben aus*, a novel that deals among other things with the international political situation.

But Grass is not to be intimidated — he rebels. Why, he asks, should he give up his puns, his exuberant joy in life, and say farewell to the Muses "because American and Russian power have taught us to tremble and (since Vietnam and Prague) dictated their morality to us?" He says that to do this would be "to show respect for stupid power, to accept their stinking morality."

Grass mocks the destructive logic of war, which destroyed Danzig. "I can remember the city of Danzig, now known as Gdansk, with words alone."

None of the powerful can match me. They are ridiculous and bunglers: into the bargain. Proudly I deny their competence to disturb me in my writing."

In this work, the products of Grass's imagination take shape and are constantly colliding with reality: fiction keeps trying to escape reality, but reality usually catches up (and outside Grass's linguistic games it even overtakes).

Where chaos creates order, those who try to reduce everything to a common denominator will certainly find fault.

Despite its fictions, this is no novel; and it is not an essay, though many subjects are dealt with graphically and provocatively, subjectively and originally; political sideswipes abound, and there is plenty of political invective, but it is no pamphlet; and though the scenes change and there are even touristic elements in places, this is no text for the travel pages.

Adventure lurks in the form, in the concurrence of the, ultimately, in the puzzle the characters play with real and imaginary events.

"I just write in random," says Grass.

"I don't drop out." Of course, he is always involved, whether he is travelling "for Goethe" in Asia or when he is describing somewhat illegal meetings between West and East German writers in East Berlin.

In *Kopfgeburten*, Grass tells of a married couple, both teachers, veterans of the student movement continually reflecting on themselves. They, too, go off on a trip to the Far East, but before this they work for the SPD in a general election campaign.

The couple, Harm and Dörte Peters from Itzehoe, have both been influenced by the ecological movement and argue about whether they should bring children into this world and if so how and when and under what circumstances — perhaps to prevent the Germans from dying out?

One of Grass's favourite fictions in this book is the idea of the Germans either as a race which has died out completely or as a race as numerous as the Chinese, whose numbers would then drop to only 80 million.

"Could we do this to the world?" Grass asks.

Especially as there would then be a danger that 100 million Saxons and 120 million Swabians would set out "to impose their pent-up industry on the world."

This thought so horrifies Grass that he says he would rather see the Germans under museum glass cases.

In this work, Grass has invented a past which comes very close to being present and includes the North Rhine-Westphalia Land election. Grass forecasts that the result of this election would be a fiasco for the SPD, but events proved him wrong. It also includes the ruling on the nuclear power station in Brokdorf near Hamburg — preliminary

permission to build has been granted. Grass does not include the ruling on the NDR, probably because in his pessimism he would not have thought it possible. But the book is an indirect rather than a direct description of the present, real though Brokdorf and Gorleben (the site of a massive proposed nuclear disposal complex) are.

Despite the narrative virtuosity, *Kopfgeburten* is a pre-eminently political work. Grass is a blowfly nibbling away at the consensus, a dwarflike Sisyphus pushing the "valley-seeking" stone up the mountain and whistling in the German forest, because fear in this country always had a high growth rate — he is the incorrigible revisionist who "constantly has to take a run-up from distant centuries to be present again."

He admits that his hopes in the snail — i.e. in slow and gradual reform — were mistaken. The snail is too fast, and we are lagging behind.

It is not Mr Doubt who sits in the cellar as in *Tagebuch einer Schnecke* but Mrs Scpticism, a full-bodied matron who mothers all progress. Whoever drains her milk becomes sour. German straits in election year 1980. Bitterness bordering on the cynical. "Being German means making the impossible possible. Or have there ever been Germans who, having realised that the impossible was possible, have accepted the impossible as not possible?"

It is not all as humorous as his treatment of figures (including Strauss) and fictions might suggest. Reality blocks the way. "We call our cowardly shrink-

ing liberal." The subjunctive is going through a boom. Nicolas Born's death is another reality: the book is dedicated to him, his early death runs through it like a black thread of mourning. Grass and Born. Neither violated the otherness of the other. One faced, the other faced away from the earth. "It is difficult to live on after you." This is no far removed from the baroque elegy, nor from anger at futile deaths.

Grass, Born and the difference: on the one hand, the alert electioneer, supporting Schmidt, the doer, forgetting Strauss and urging Schmidt to do "what remains to be done."

On the other the helpless writer, wanting to measure reality against the possibilities, hinting at these possibilities, introducing an element of utopia against all realities.

Nicolas Born complained: "For the time being the does are making reality, and literature provides the appropriate realism."

Grass does not try to avoid this dilemma. Very sure of himself, he does not want to leave realism or reality to the does. This disturbs both the politicians and the aesthetes. They preferred his monumental novel *Der Butt*, whether anyone read it or not.

Nietzsche revival shows need for intellectual heroes

Philosopher Friedrich Nietzsche (1844-1900) is making a comeback. This would not have surprised him. He was, after all, the philosopher of "eternal recurrence."

This country's intelligentsia cannot it seems get by without intellectual heroes. In the sixties and seventies this hero was, of course, Karl Marx.

The latest edition of the *Hamburg Literaturmagazin* is devoted entirely to Nietzsche.

Hanser Verlag of Munich has now published a three-volume biography of Nietzsche by Curt Paul Jahn.

And dtv has also published a two-volume work on *Nietzsche und die deutsche Literatur*.

The idolisation of Nietzsche, especially of his aesthetic theories, is a reaction against those who say that art must have a social function. Nietzsche stressed the importance of *Schöpfung* (appearance) in art.

Nietzsche is best known for his ideas on "eternal recurrence." Karl Heinz Bohrer in his authoritative essay "In this

Friedrich Nietzsche
(Photo: Interpress)

Literaturmagazin says: "We will have to say goodbye to the nation of progress."

But do we have to? Is art only "for the frivolous purpose of pleasing" as Schiller put it?

Social criticisms of art undoubtedly do contain moralistic elements, extremely hostile to art — and in recent years we have seen the results of this view taken to the extreme. On the other hand, the interplay between art and society is crucial, if only to prevent art from becoming inaccessible in an ivory tower.

Attacks by the "school of life" on self-satisfied art for art's sake aesthetics have been part of our cultural history since the 19th century.

What, after all, were the motives of Junges Deutschland, the expressionists, the Zurich Dadaists and the Gruppe 47?

The new apostles of Nietzsche are right only in that they want to relativise Marx. But a jumping away from modern art?

A cult of the superman, the declaration of critical enlightenment to be an illusion? The veil of aestheticism is the religion of the future?

No thanks. They are substituting one extreme for another.

Why don't we just do without these intellectual saviburs for a change? *Matthias Schreiber*

MINORITY GROUPS

School bussing project aims at quickening integration

The North Rhine-Westphalia city of Krefeld is running a pilot system of bussing migrant children in an attempt to extend integration of schools.

Finance is provided by the municipality, the Land government in Düsseldorf and the Education Department in Bonn.

A typical pupil affected by the scheme is Sibel Alper, an eight-year-old girl born in Turkey.

The Alpers live in the city centre, in a street with friends or relatives in every other house.

Statistically, one in two or three houses in this part of the city is tenanted by Turks.

But Sibel does not go to school in her own borough. Together with other Turkish children, she is bused every morning to an elementary school.

This school is several kilometres north of her home, in a green part of the city, dominated by gardens, trees and upper class housing.

After four years of elementary schooling, 90 per cent of German children go to the *Gymnasium* (secondary school preparatory to university) or *Realschule*, which is geared more towards the trades and other non-academic occupations.

In another two years, Sibel, too, might be one of these 90 per cent. Her teachers say that she will have no problems coping with one of these two types of secondary schools.

The objective of the scheme is to do something practical about integrating foreign children.

Krefeld is so proud of its project that its Mayor Hansheinz Hauser (CDU) issued an information brochure which he wrote himself.

It says: "Krefeld was probably the first German municipality to have unanimously decided in favour of an educational integration of foreign children — and that as far back as 1974."

Equipped with a good education, Herr Hauser says, out foreign children will be enabled to make the best use of the opportunities in this country.

Krefeld is typical of many cities in Germany's industrial conurbations. Of its population of 230,000, 22,000 are foreigners, mostly Turks, Greeks, Italians, Portuguese and Spaniards.

In the past eight years, at least one out of four children born in Krefeld had non-German parents.

Very few foreigners opt to return to their home countries — a nationwide trend.

Mayor Hauser says: "The fluctuation of former years has now given way to an extended stay. For many foreign children, Krefeld is thus not only the place of birth but also their permanent home city."

Unlike many of his opposite numbers in other German cities, Mayor Hauser does not shirk a political decision.

"Our problem now is not to decide how many foreigners are to live in Krefeld but how they are to live," he says.

But it is a long and thorny road from recognising a political problem to implementing the remedy in everyday life.

The Krefeld experiment is a venture into new territory, and not everybody approves of it.

Education Department official Eike-Dieter Schäfer, still somewhat bitter about the attitude of rejection he met

with in various quarters, says: "Until about three years ago we stood with our backs to the wall because nobody dared tackle a deliberate political integration of foreign children in German elementary schools. All municipalities around us stuck to the system of preparatory classes for foreigners."

What he meant was the official policy of the *Länder* (supported by Bonn) that separates foreign children by nationality and then makes them attend special classes for two or four years or perhaps even for all of the nine years of compulsory schooling.

By and large, the bitterness in Krefeld has given way to satisfaction over the successful experiment which has been supported by all parties in the City Council and which other municipalities still have before them.

Meanwhile, the official policy towards foreigners has changed and "integration" is everywhere — be it in Bonn or the *Länder*.

It is also in with the big business associations and the churches. It is the policy of the *Länder* of both political colours.

But even on a lesser plane, there is a change in everyday life at school.

It has always been unclear what the "preparatory classes" are supposed to prepare the foreign children for: were they to be prepared for an eventual return to their parents' home country and schooling there or were they to be prepared for a regular German school?

No progress has been made with such classes — neither in Krefeld nor elsewhere.

One teacher says: "The children's performance deteriorates all the time."

Other municipalities have meanwhile come to realise that things cannot continue as they are. As a result, educationists are flocking to Krefeld to get a first hand idea of how that city's pilot project works.

These educational policy makers will have to decide on the development of

our school system in the 1980s. But while they are eager to see how Krefeld is faring, the political and educational barriers in many German cities are such as to make it almost impossible to emulate the Krefeld project.

Though CDU-governed, Krefeld has had the support of all political parties in implementing a strict school plan which has been in operation for the past 10 years.

The city's chief administrator of the educational system, Paul Pinggen, explains: "Since the early 1970s, we have systematically reshuffled foreign children whenever the quota of foreigners in a particular city district or street reached more than 20 per cent. Sibel Alper is one of these 'overhang' children."

("Overhang" is Krefeld officialese for an excessive quota of foreigners in any given area of the city).

In practical terms this means that the neighbourhood school will accept a maximum of 20 to 30 cent foreigners. All other foreign children must be divided up among schools.

More and more of those parents who have decided to stay in Germany per-

manently have taken their children of Greek or Turkish language class.

Krefeld city planners say that there is a trend among foreign parents to their homes to where their children school is. This would seem to be an ideal of frictionless integration worth emulating — especially in view of the relative importance of the period of elementary schooling for the child.

But Klaus Klemm, one of this city's most outstanding educationists, warns about a too hasty imitation of Krefeld model to get out of a political dilemma.

He considers it more than doubtful whether German parents in Düsseldorf or Stuttgart will put up with the "import of problems" through foreign children in German schools.

He cites a letter which German parents sent to the school authority in Lünen: "We shall not stand by while irreparable damage is done to the chances of our children who will become the 'lost minority'."

This letter could have been written by parents in any German city.

Herr Klemm has found that German parents are looking for a school where most children are foreigners. "They loath to send their 7-year-old daughter to a school four kilometres away from home only so that she should go to school with fewer foreign children," he says.

Moreover, the daily bussing imposes considerable strain on the children.

His most important objection to the bussing system and the reshuffling of children in elementary school is the quota of foreigners below 20 per cent is that there can never be genuine integration "if the school happens in the morning and the parents pick up the child in the afternoon."

Sibel Alper is an example: she was picked up by a Turkish teacher and taken to the appropriate classroom. Now, in the third grade, German is also taught jointly.

This being taken from one classroom to another is a cause of unrest for both children and teachers. It is the children themselves who want to be together as much as possible.

More and more of those parents who have decided to stay in Germany per-

manently have taken their children of Greek or Turkish language class.

Krefeld city planners say that there is a trend among foreign parents to their homes to where their children school is. This would seem to be an ideal of frictionless integration worth emulating — especially in view of the relative importance of the period of elementary schooling for the child.

But Klaus Klemm, one of this city's most outstanding educationists, warns about a too hasty imitation of Krefeld model to get out of a political dilemma.

SCIENCE

Dispute over 'body-clock' experiments

Tests by behavioural scientists on the human "biological clock" are to end because the institution involved is to be closed.

The Max Planck Institute at Erling-Andechs, near the Ammersee in Bavaria, has been carrying out the experiments since 1964 with volunteers spending time in an underground bunker cut off from their normal environment.

Some of the findings show that our bodies have 25-hour cycles, not 24-hour.

However, the justification for closing the institute, according to Max Planck Society spokesman Robert Gerwin, is that the pioneering work has largely finished or is being continued at other universities.

This is disputed. A member of the team involved in the experiments, Professor Rütger Wever, says: "We had not noticed that our work was anywhere near finished."

The volunteers taking part in this test spend four weeks in an underground bunker which used to belong to the Wehrmacht. In this time, they are completely cut off from all contact with the outside world.

The experiments have been going on since 1964 and in this time 237 people have spent between 28 and 89 days underground.

To answer these questions, Aschoff

Life in an underground bunker: 25 hours in a day?

(Photo: MPG)

The project team is led by Professor Jürgen Aschoff. He will retire when the institute closes, and no successor has been found.

Wever says that the conditions for the experiments in this bunker are ideal. It is completely cut off from light and noise from outside. The only connection with the outside world is a slit through which food and letters are passed.

Aschoff, 66, has long been interested in inner processes in the human body. He studied medicine at Freiburg University. Then he specialised in the study of biological rhythms: do animals and human beings live according to outer clocks such as the change from day to night? Or is their behaviour influenced by their own inner clocks? And if so, how do they work?

To answer these questions, Aschoff

needed to be able to isolate people completely from the outside world. In the bunker, people live according to their own notions of time. They can go to bed whenever they feel tired and decide on their daily timetable independently of the rhythm of their environment.

Wolfgang Mielthge, a 30-year-old psychologist, was one of the volunteers. Before going to sleep he had to put electrodes on his head so that the structure of his sleep could be recorded. During the day, Mielthge took concentration and reaction tests. He also gave urine samples.

He describes his time in the bunker: "I decided my own daily rhythm. When I felt really awake, I got up. I had no orientation whatever and had only my own rhythm to go on."

He said he was only bored for an hour during the entire four weeks. He worked on his doctoral dissertation, listened to records and read. "I never felt any anxiety. But I probably would have been bored if there had been no pressure to work."

Like all the other volunteers, Mielthge was asked to tick off the days. When according to his reckoning 25 days had passed, the test was over.

Mielthge's results are typical of those of many volunteers. His daily rhythm differs from the normal 24-hour rhythm. Mielthge's rhythm was a 27-hour one. In other words, his inner hour was three hours behind in these conditions.

As the biological clock does not have an exact 24-hour rhythm, scientists talk of "circadian" periods. The average circadian period of the volunteers was 25 hours, one hour longer than the ordinary day.

In these conditions of isolation, the relation between temperature and day-night rhythm also changes. Under normal conditions, our body temperature is highest in the evening and lowest in the early morning.

In the case of these volunteers, the temperature maximum occurred only a few hours after the day began and the lowest body temperature was a short while after the volunteer fell asleep.

Could it be then that the sleeping-waking rhythm and body temperature are regulated not from one but from several clocks? Observation of two thirds of the volunteers seems to confirm this.

Among these volunteers, the temperature curve has a 25-hour rhythm, but the times of sleeping and waking are completely out of cue. Some volunteers had 18-hour days, others prolonged their period of activity and rest to 50 hours.

The amazing thing is that none of the volunteers even noticed this. And there

Short-sighted people 'are cleverer'

Short-sighted people are cleverer. Tests in several West German *Länder* have shown that although only 15 per cent of the total population are short-sighted, the proportion of the myopic among intellectuals is two to three times higher.

Professor P.-D. Steinbach of the Düsseldorf Marienhospital, provided a plausible explanation of this phenomenon in the Stuttgart medical magazine, *Deutschen Medizinischen Wochenschrift*. Steinbach says that short-sightedness and intelligence are connected as the result of a sifting of genetic variants. This means that the short-sighted individual, because of his frailty, concentrates on activities where short-sightedness is no hindrance.

He is therefore more likely to turn to academic studies than to sports. In this way, eyesight, like other physical factors such as strength, sensitivity to heat and to light, becomes effective as a classifying factor.

The final result of this sifting as a result of genetic factors is a certain biological type in which characteristic combinations of physical features are frequently found. These in turn are connected with typical behavioural characteristics.

What the south Germans call *Grossköpfe* and the Americans egg-heads are basically no more than characterisations of members of a particular social class or profession on the basis of their typical features, which distinguish them from other comparable groups.

Short-sightedness is very often found in conjunction with tallness, weakness of the connective tissue, flat feet and stomach and kidney subsidence.

The reason that such characteristic features become more pronounced from one generation to another is, according to Steinbach, that as our external living conditions become standardised genetic factors assume ever greater importance.

Biological social types and the proportion of short-sighted people in certain

groups will increase, because people from similar social backgrounds tend to intermarry.

A study at a Berlin schools produced an impressive illustration of the connection between short sightedness and intelligence.

Thirty-five per cent of grammar school pupils were short-sighted, but only nine per cent of special school pupils and secondary modern school pupils without the leaving certificate suffered from short-sightedness.

In all, the proportion of short-sighted children of graduates, civil servants and office workers was high.

There was also a correlation in size. Children who were above average height when starting school but not short-sighted tended to become short-sighted more frequently than other children.

The general opinion now is that children do not become short-sighted because they read a lot — they read a lot because they are short-sighted.

Angela Heck

Glorious weather for 8.50 DM

is too much to expect, but we can promise you that with the aid of our climate handbooks you will be able to travel when the weather suits you best.

Business and private travel overseas calls for careful preparation. The weather varies so wildly that you may be in for an unpleasant surprise.

These climate handbooks are compiled by experienced meteorologists and list monthly statistics for major cities: temperature, rainfall, rainy days, humidity and mention of special features such as fog, thunderstorms, whirlwinds and so on.

Reference sections round off the data, making the climatological handbooks comprehensive guides every traveller will need. They include 66 charts and about 11,000 figures on 60 to 80 pages.

Climatological handbooks are available for Latin America, East Asia and the Middle East.

Fill in and send to: INTERPRESS Overseas Verlag GmbH, Schöne Aussicht 23, 2000 Hamburg 76, Tel.: (040) 22 88 226. Please send me your climatological handbook to the: ☐ MIDDLE EAST ☐ FAR EAST ☐ LATIN AMERICA. The handbook interest me as an advertising medium. Name: _____ Street: _____ Town: _____

SOCIETY

Punks: gathering power of an undefined philosophy

An arch-enemy: a "popper"

(Photo: S. Heydekamp)

Graffiti like "Chaos in the Fed. Rep. of Germany," "No power for nobody" or "Death to the Teds" abound. They are written by one of the most bizarre segments of our youth subculture: the punks.

They consider themselves social outcasts and do all they can to fill this role. "Rather a poor Punk than a bourgeois swine" is their motto.

They are natural enemies not only of the teds but also of the "poppers", a modern, German version of the mods (of rockers fame).

The movement was imported a couple of years ago from Britain, where it originated in the slums of London.

Originally, these outsiders were brushed aside as an exotic phenomenon of our day.

"The toughness and violence most of the punks try to demonstrate is nothing but show," wrote a major German news magazine.

Eventually, punk music became chic as a sub-species of rock. This developed into the new wave music, and the punks

'Body clock'

Continued from page 13

was no change in their concentration — arithmetical tests proved this.

These tests could cast new light on many other fields of research. The tests showed for example that the body reacted differently at different times of day to drugs.

Penicillin, in small doses, is most effective between 7 p.m. and 4 a.m. Statistically, this antibiotic is most effective against infectious diseases when administered at 20.32 p.m.

Correctly applied, these results could have a very relevant impact. The training effect, for example, is much greater at 5 p.m. for example than at 9 a.m.

Although the results of chronobiology have raised innumerable questions, the Institute is to be closed.

But Professor Wever is not going to give up. "We will continue our work somehow, even if it has to be under another name," Günther K. H. Zupanc

(Frankfurter Abendblatt, 7 June 1980)

were no longer mentioned except in connection with this type of music.

But horror headlines in the past few months have proved that there is more to them than music.

It began on a spring weekend in Hamburg when punks invaded Pösel-dorf, an upper-class suburb.

They demolished cars, beat up some of the "beautiful people" having tea in their gardens and engaged in a fierce battle with the police.

Though many were taken to prison, the punks struck again only a few days later in the city centre of Hamburg.

The 12 to 20-year-olds grabbed dozens of sidewalk café chairs and tried to block off the Mönckebergstrasse shopping area.

Another battle with passers-by and the police ensued and again many punks were taken to prison.

And only a couple of weeks ago about 100 young people stormed a concert of the British punk band "The Clash." There were many injured as the invaders beat up the musicians. Ironically, it was band leader Joe Strummer, 27, who had tried to defend himself by hitting out with his guitar, who was arrested. The concert had to be cancelled.

The reason for the attack was that "The Clash" are considered traitors by hard core punks because they deviated from tough polit-punk movement for the sake of a lucrative contract with a recording company.

This bodes no good for certain German groups such as "Dr. Koch Ventilator" and "Extra Work." They, too, have contracts with recording companies.

Hamburg's Senator Werner Staak, who is in charge of security recently said that he had full understanding for the fact

Continued from page 12

party, his parents are usually very reluctant to let him accept the invitation.

This is certainly not the sort of political integration Krefeld's mayor had in mind.

In any event, nobody in Krefeld knows what will become of integration after elementary schooling.

If Sibel goes to *Hauptschule* (the minimum compulsory schooling preparatory to vocational training), as do most other Turkish children, the one to the ratio will be untenable anyway.

The Krefeld ratio is like that of any other German city — one to one. What these children do have in common is that their fathers are blue-collar workers.

Klemm says it is intolerable that it should be this group, which in any event consists of underprivileged children, that is saddled with the unsolved problems of our aliens policy.

But what sort of solution would offer a genuine chance of children like Sibel?

Educationalists of Herr Klemm's ilk would like to see the determination and single-mindedness with which Krefeld implemented its bussing and reshuffling system applied differently: "Integration only stands a chance of success if it included all school-going children in a city borough and if there is no skimp-

that some of the people were worried about punk excesses.

He considers the violence perpetrated by the punks (many of whom are unemployed) as much of a problem as were the so-called "Rockers" several years ago.

Punk violence is directed against the establishment as a whole, though it concentrates on the so-called Teds. ("Teds make you puke").

Herr Staak is having punks who were arrested by the police brought home from their cells by their parents, hoping that the parents will make it clear to the children that violence leads nowhere. But most parents find themselves powerless.

In fact, the punks themselves are vague as to what they expect of life. Their attitude can best be summed up with a line from a popular song of "The Clash": "I run through the empty stone because I'm all alone."

Counselling centre founded to help Berlin's prostitutes

An organisation to help prostitutes has been founded in Berlin.

The aim is to provide counselling and specialist advice on the law, insurance and tax.

It will be done through a centre to open in July in the inner Berlin area of Charlottenburg.

Another function of the centre will be to motivate the prostitutes to train for jobs. The emphasis will be on self help.

Though the funding of the project is still uncertain, the initiators are confident that Bonn will provide the cash.

There are about 4,000 registered prostitutes in West Berlin.

They work in brothels and massage parlours or simply pound the pavement. Most of their customers are married men, from all social strata. But only the

The age of punk.

(Photo: dpa)

prostitute, not the customer, is ostracised.

In a society that maintains its standards by providing an opportunity to circumvent them, the prostitutes form a peripheral group.

Branded as criminals and sexual deviates, they live in society's ghettos.

This very moral condemnation has the prostitute to remain in her social environment.

The fear of stepping out of the accustomed surroundings into an unknown environment and the attendant fear of inferiority makes the prostitute increasingly dependent on her pimp.

South America is undoubtedly the second stronghold of the soccer code. Apart from Brazil, Argentina and so on, the only countries missing from the world championship cavalcade were, say, the Australians or the Africans.

Bettina Schroeter-Klein
(Der Tagesspiegel, 8 June 1980)

School bussing

ing on teachers and educational aids," he says.

In political terms, this means the removal of the traditional differentiation between the various forms of schooling. But, says Klemm, "it is very difficult, if not impossible, to realise such structural changes."

Six years ago, when the Institute for Research into School Development, Dortmund, of which Herr Klemm is a member, tried to evolve a scheme to solve Frankfurt's problems with foreigners, he and his team foundered on the political timidity of the SPD majority at the time. Today's prospects (and not only in Frankfurt) are even worse.

No-one now thinks anymore of replacing the present system by a single type of school to be attended by all children though offering a variety of curricula.

The Social Democrats, now have also yielded to the parents' wishes and the demand that the comprehensive school be introduced as a fourth type of normal school (next to *Realschule*, *Gymnasium* and *Hauptschule*). And all plans for a replacement of the traditional three-tier system by a comprehensive school have been shelved.

The Dortmund Institute doubts that the "parents' wish" to continue the in-

tegration begin in Krefeld's elementary schools will be enough for it to do so continue.

Even avid supporters of the project are too angry and disappointed to show any inclination to shoulder additional problems.

Moreover, all good resolutions when it comes to a person's own child. "The opposition to the comprehensive school will grow once the German middle and upper classes realise that in *Gymnasium* and *Realschule* they have in a comprehensive school."

A bleak view that is out of keeping with the optimistic statements made by politicians. But, says Herr Klemm, "human realism will get us further practically and could even help us take the seemingly insurmountable hurdles."

This is an appeal to reason and a sense of responsibility towards children like Sibel and towards the children of German blue collar workers.

Herr Klemm: "Unless something happens, our cities will disintegrate into individual ethnic ghettos."

Meanwhile, Krefeld's Information Bureau states: "Sibel Alper — a Turkish Krefeld girl, born in Turkey and growing up in Krefeld, she has two brothers in Turkey. She will make her way in life."

But will she?

SPORT

European soccer takes on new gloss

Germany has won the European soccer championship. They beat Belgium 2-1 in the final in Rome following qualifying rounds. The Hamburg player, Horst Hrubesch, scored both goals. In the play-off for third place, Czechoslovakia beat Italy, the host nation, in dramatic fashion. The match proper ended 1-1 and was decided 9-8 on penalties.

After flopping at Lake Placid and deciding not to enter for Moscow, West Germany was virtually left with the European soccer championships in Italy as the sporting event of the year.

Boycott demands would have made no difference to this soccer highlight. The European championships might just as well have been held in Moscow.

After all, there was talk of boycotting the 1978 world championships in Argentina, but nothing came of it. Yet in Italy the TV cameramen all but boycotted the event.

The day before the European championship tournament began they were talking in terms of laying down tools because they were not being allowed sufficient expenses.

But this was only a momentary flurry. Soccer is unquestionably the most popular sport in Europe. Pre-war poet Heinrich Ringelnatz, a writer of humorous verse, took the football craze to task.

With soccer reigning supreme in Europe, the European championship falls little short of the world championship in importance, with only the South American countries as Europe's major world rivals out of the reckoning.

South America is undoubtedly the second stronghold of the soccer code. Apart from Brazil, Argentina and so on, the only countries missing from the world championship cavalcade were, say, the Australians or the Africans.

True enough, the German team did seem to be suffering from a bout of exam nerves in the Olympic Stadium at Rome. It was a full hour before Karl-Heinz Rummenigge of Bayern Munich put the first score on the board.

The fans must have breathed a sigh of relief. It would have been a disastrous sporting year indeed if, after the Lake Placid and Moscow fiascos, West Germany had flopped in Italy too!

The clincher: Horst Hrubesch heads the winning goal past Belgian goalkeeper Jean-Marie Pfaff to give West Germany the championship. (Photo: dpa)

Mental strain on the way to world decathlon mark

Decathlon world record-holder Guido Kratschmer lay flat out at Bernhausen, near Stuttgart, after finishing his final event with 27 points more than Britain's Daley Thompson, who himself had beaten Bruce Jenner's Montreal world record only a month previously.

It was minutes before he was fully conscious again. Then a smile came over his tired and overstrained face. He had totalled 8,649 decathlon points, 27 more than Thompson and 242 more than Jürgen Hingsen from Uerdingen in the Ruhr, whose 8,407 had taken him at one fell swoop to No. 6 in the world ratings.

"It is," he said, "a world record for me, for my coach and for my relations." These words spoken by the 26-year-old farmer's son from Bavaria are unlikely to be forgotten by national decathlon coach Wolfgang Bergmann.

Bergmann has helped Kratschmer, now a student of physical education at Mainz University, throughout his career. It began internationally with a surprise European bronze medal at Rome in 1974.

Kratschmer went on to take silver medal as runner-up to Bruce Jenner of the United States at Montreal aged 22. In 1978 he was unable to take home the European championship title because of injury.

But by way of consolation he set up a European record decathlon points tally. This year, another even year, he has gone on to set a new world record.

The moment of triumph, in his 25th career decathlon competition, came near the end of his sporting career. "The world record means more to me than my Olympic silver medal. I shall never improve on it. My career is nearing its conclusion."

He was planning to retire regardless, and the possibility, suggested in Bernhausen, that he might be capable of even more is unlikely to make him change his mind.

In 1975, as a physical education student, he passed "mountain climbing" proficiency tests. He now feels he has scaled the Mount Everest of the decathlon, or could yet well do so.

"Yes, I reckon I could make it 8,800 points. The Bernhausen competition should have been held four weeks later."

But for the time being his personal Everest will remain at 8,649 points, a

tally he reached by steady improvements from one event to the next.

It included his second-best 100 metres time of 10.58 seconds and a mere 4cm below his best distance of 7.84 metres in the long jump.

His 15.47 metres in the shot-put were the exact distance he was aiming for, whereas 2 metres in the high jump was 3cm below his personal best.

His 48.04 seconds over the 400 metres came as a personal disappointment in comparison, but this was only the first day. More was to come.

Some 1,500 spectators saw him go from strength to strength in a sun-splashed arena on Day 2 of his world record bid. It began with a West German season's best time of 13.92 seconds in the 110 metres hurdles.

Then came 45.52 metres in the discus, 4.60 metres in the pole vault and 66.50 metres in the javelin, all strictly according to schedule, according to Kratschmer.

After 9 out of 10 events his tally was 8,019 points, or 17 more than Daley Thompson, who on 18 May had been the first man ever to clear 8,000 points at this stage of the proceedings.

This left him with a 1,500 metres race he had to finish in 4 minutes 27.9 seconds to clinch a new world record. In the toughest race of his career ("Never have I been so *kaputt* beforehand") Kratschmer passed the post in 4 minutes 24.2 seconds.

Between events he took catnaps under a parasol, looking supremely relaxed. He whiled away the time taking massage and thinking ("I couldn't afford to have any doubts as to my ability to pull it off").

TV interviews came as a disturbance and he slept badly during the night between his two world record days. "The mental strain really took its toll. Never before have I worried much about the points," he said.

This time he too started doing mental arithmetic. But the coloured Briton's May world record had not left him feeling he had to improve on it.

Weeks beforehand, with West Germany almost certain not to enter for the Moscow Olympics, he had noted that "a new world record in the only option left open to me now Moscow has gone by the board."

Cartoons

Continued from page 10

authors and directors tended to prefer nice middleclass children for their film reports, whether fictional or documentary.

Too many films were expensively produced in a sterile studio atmosphere, they said.

For the first time the Prix Jeunesse gave participants the chance to see all the works in the three new categories: telling stories; information; music and entertainment. Showings were followed by detailed discussion and analysis.

This was a major improvement. In previous festivals, participants had to concentrate on certain rather outmoded categories (pre-school, children's and young people's films) if they wanted to avoid overlapping of showings and possibly missing something worthwhile.

There was widespread approval of the new system and after three days we had the satisfaction of having seen an overview of "international children's and young people's films."

The organisation was, as usual, perfect and this made things easier for everyone concerned, creating an atmosphere in which discussions and conversations beyond the frontiers of national TV organisations could be held.
